

Earthdata Wiki Plugin List

Current User-installed Plugins

The Earthdata Wiki has a number of user-installed plugins that are available for use to benefit the collaborative environment. The plugins may contain one or more macros that can be used to add extra functionality or add dynamic content to a page. If you find a plugin that is available but is not on the list below, you can either send an email to the [Earthdata Content Team](#) or submit a JIRA ticket for consideration. Please keep in mind that anything which will end up with additional cost must have a justification that includes the amount of usage expected, benefit analysis, needs analysis, etc.

See [How to use a Macro](#) for more information.

Plugins from the Adaptavist Essentials Pack:

- **Advanced Search** – provides an interface to the Confluence search engine enabling the creation of highly customizable search queries and lists of results.
- **Attachment Download** – provides a fixed URL for your attachments that doesn't change and respects the permissions already set.
- **Backup Manager** – makes it simple to take nightly backups of Confluence as well as list, download, and automate the deletion of older backups.
- **Community Bubbles** – allows you to put all your key information on a personalized, customizable page (whether it be RSS feeds, wiki pages, macros, or OpenSocial Gadgets). You can then arrange the page however you want, and all changes will be remembered ready for when you next view it.
- **Content Formatting Macros** – a collection of 25 macros that help you to format content in Confluence more easily and enhance the appearance.
- **Create Page Macro** – helps users to create pages in the right place, with the right template and correctly formatted page title.
- **Descendent Notifications** – extends Confluence's page watch functionality to an entire hierarchy of pages, whenever something changes on a selected page or its descendants, you'll get notified by email.
- **Footnotes** – allows you to easily create footnotes in your content.
- **Form Mail NG** – enables you to create custom forms in your pages. You have full control of the fields, their layout, and you can validate the input, autocomplete a logged-in user's details and protect yourself from spam.
- **Label Tools** – lets you automatically add or suggest labels for users to add to a page – this can help you to categorize pages in a space by a known set of labels.
- **Page Information Tools** – allows you to display the various bits of information about pages and blog posts in Confluence that are usually hidden away. By combining macros together, you can show things like who created the page and when or the current version number and date it was last modified. It is particularly useful when working with custom themes or formal documentation.
- **Plugin Licensing Manager** – a one-stop shop for administrators to manage plugins and their licenses.
- **Rate Macro** – enables you to easily collect and display user-ratings on pages and blog posts.
- **Replace and Render** – allows replacements to be made within a block of wiki markup. It provides a set of macros that can be used to take the output of one macro and use it as the input for another.
- **Synonym** – helps improve search within your pages by automatically adding a set of labels that you define to content in the search index.
- **Theme Builder** – allows you to design and create a professional looking theme that brings your pages in line with your other applications and corporate identity.

Adaptavist Essentials Pack plugins not installed:

- **Group Signup** – not used due to security concerns
- **Move Comment** – not used because it is not compatible with our version
- **Page Family Tag Cloud** – not used because it is not compatible with our version
- **SSLPost** – not used because it is not compatible with our version
- **Sub Section** – not used because it is not compatible with our version

Administration Menu Items - UI items which appear in the administration menu.

Atlassian Templates:

- **Human Resources** - a collection of human resource templates.
- **Software Development** - a collection of software development templates.

Chart - supporting the display of charts on pages (including pie, bar, line, area, scatter, time series, and various xy chart types). Data for a chart can be simple Confluence tables, CSV or Excel files, or the results from SQL queries.

Checklists Macros – a collection of macros that helps generate checklists

Confluence HTML Macros - macros that allow users to include raw HTML code within a page.

Confluence Source Editor - This plugin adds the ability for advanced users to edit the Confluence storage format directly.

Create Menu Items - UI items which appear in the Create menu (page, page from template, etc)

CustomWare Plugins:

- **Linking** - contains macros for linking to templates, the dashboard and other features.

- **Redirection** – macros that allow pages to redirect to other locations, as well as aliasing existing pages.

Dynamic Task List 2 - macros to generate dynamic task lists

Global Header Image Links - UI icons which appear in the global header.

Google Plugins:

- **Google Calendar** - creates Google Calendar links within a page.
- **Google Maps** - macro which displays Google maps within a page.

Help Menu Items - UI items which appear in the Help menu.

ImageMap Macro - creates an ImageMap for an image, which defines links for regions within the image.

Numbered Headings – numbered headings (including decimal, full decimal, lower and upper greek, lower and upper roman, lower and upper latin, custom, Rest service and servlet filter, and NH TinyMce CSS and JS resources).

Page Tree - generates a tree view of a hierarchy of pages.

CustomWare Plugins:

- **Random Bits (RB) Filtering (Confluence)** - provides Criteria and Parameter implementations for Confluence.
- **RB Filtering (Core)** - a support library containing the core API for Criteria.
- **RB Storage (Confluence)** - an extension to the Storage API, providing implementations for Confluence backends.
- **RB Storage (Core)** - provides a common API for accessing stored data in number of formats, with different back-ends.
- **RB Storage (Parameters)** - an extension to the Source API, providing support for parsing parameter strings with various delimiters.
- **RB Storage (Servlet)** - an extension to the Storage API, providing implementations for Servlet backends.
- **RB Supplier (Confluence)** - provides Confluence-specific Suppliers.
- **RB Supplier (Core)** - provides a simple way for plugins to provide data access points to their own APIs that can be used across multiple other plugin, such as the Reporting Plugin, Linking and Scaffolding.
- **RB Support (Confluence)** - provides some commonly-used classes and libraries.
- **RB Support (Core)** - provides support classes and services.

Social Bookmarking - contains plugin modules to add social bookmarking functionality to Confluence.

Support Tools - helps Atlassian customers with their products.

Survey and Vote Macros - a set of two macros that are designed to gather information from confluence users

- vote macro - allows users to vote on a single issue and will tally the results as they are cast.
- survey macro - builds on the vote macro to collect user votes and comments on many issues.

Table Filter - Filters table data

Team Calendars – provides three types of calendars (People, JIRA, and Event) to keep your team on schedule and moving forward together. This is part of the core purchase and is embedded within the Confluence pages.
